

Bending Frequencies

R 4,500.00 ex. vat

"Harmonic Resonance" is an immersive and captivating art installation that explores the concept of bending frequencies. This multidimensional experience invites visitors to engage with the intersection of sound and visual artistry, creating a harmonious fusion that transcends traditional boundaries.

Upon entering the space, you will find yourself surrounded by a mesmerizing interplay of vibrant colors and ethereal forms. The room is bathed in soft, diffused light, creating an atmosphere of tranquility and intrigue. The walls are adorned with meticulously crafted sculptures and paintings that depict the fluidity of sound waves as they traverse the fabric of space.

As you move through the installation, your senses are immediately engaged. Delicate and ever-shifting melodies fill the air, emanating from hidden speakers strategically positioned throughout the room. These melodies are not mere compositions but rather the manifestation of frequencies themselves, seemingly bending and intertwining as they dance through the space.

The visual components of "Harmonic Resonance" are equally captivating. Abstract sculptures, seemingly frozen in time, capture the essence of sound in their dynamic forms. Made from a variety of materials, these sculptures embody the ebb and flow of frequencies, creating a tangible representation of the invisible vibrations that permeate our existence.

Intertwined with the sculptures, large-scale canvases showcase vivid paintings that depict the harmonious convergence of sound and color. Brushstrokes seem to ripple like soundwaves, blurring the boundaries between auditory and visual sensations. Each brushstroke is intentionally designed to evoke a sense of movement and energy, echoing the dynamic nature of frequencies as they blend and collide.

Frame	None
Medium	Fine art textured silk
Height	29.70 cm
Width	42.00 cm
Artwork Height	29.7
Artwork Width	42
